

SIGN PRO

SUBSTRATES

COROPLAST

Corrugated Plastic is a lightweight, economical sign product, best for indoor or short-term outdoor use. Perfect for real estate, political, and event signage. Can be used with stepstakes for outdoor display. Comes in standard 4mm or 10mm thickness for extra rigidity.

TROVICEL

A high-density PVC Plastic (also known as "Sintra") available in 1mm - 19mm thicknesses. Good for all indoor use. Great for tabletop displays and as a mounting board for full-color prints.

ALUMALITE

6mm or 10mm thick substrate comprised of two layers of .019" aluminum with a baked enamel finish and a core of corrugated plastic. Class-A flame retardant, Alupalite is appropriate for commercial, industrial & retail signage. Great for double-sided signs.

ALUPANEL

A two-sided pre-finished aluminum composite panel consisting of two .30mm aluminum sheets with a black polyethylene core. Our most versatile substrate, Alupalanel is lightweight yet amazingly rigid. Recommended for use indoors and out.

MAGNET

30 mil Matte White. This flexible and durable Magnetic Sheeting comes in large rolls so we can custom cut just the right size to fit your vehicle door.

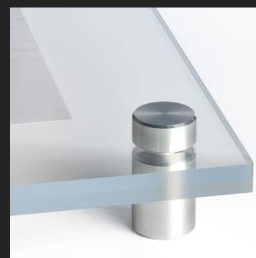

BANNER

13 oz. weight/thickness banner material that is suitable for outdoor or indoor use. We can print your artwork directly on the banner and then hem for strength and grommet for ease of hanging.

ALUMINUM

Aluminum is a lightweight product designed primarily for outdoor use. Durable, with a baked enamel finish, Aluminum is weather- and rust-resistant. Comes in .040, .063, and .080 thicknesses.

ACRYLIC

With several thicknesses of Acrylic available, this material is most commonly used for lighted signs. It can also be used in any number of ways for non-illuminated signage. With it's high-gloss finish, it's an elegant look for many sign applications. Pictured with stand-offs.
